

**PACKAGING DETAILS**

**Small bundle packing**

Each tube is sleeved with plastic bag, and then about 10-30 kgs tubes are packed into small bundle, with woven belt. This packing is very normal, usually used in the Middle East market, South American market, and also preferred by some EU customers.

**Big bundle packing**

Each tube is sleeved with plastic bag, and then about 300-500 kgs tubes are packed into big bundle, round at hexagon shape, sqr/rec at sqt or rec shape, outside there will be thick plastic board, each bundle with at least one belt. This packing is very normal too, usually used in EU market and Brazil.

**Wooden bundle packing or steel crate packing**

Each tube is sleeved with plastic bag, and then about 800-1000 kgs tubes are packed into wooden or steel crate. Wooden crate must be non-fumigation. This packing is usually used in LCL shipping, or some valuable tubes, such as 800 mirror polishing tubes and slot tubes.
